AT A GLANCE

Shaik's multi services is a Dubai based customized timber packaging industry, having industry expertise and packaging capabilities. It is the leading supplier of timber packaging material having ISPM 15 heat treatment certification. Innovative ideas with improved quality at Shaik's multi services offers safe packaging solution.

Shaik's multi services are engaged in providing following packaging solutions for various industries:

- Highly flexible lashing cargo
- Flat-rack services
- Car lashing & securing
- Boat wrapping & lashing
- Pipe lashing & bundling
- Stacking
- Industrial heat shrinks & wraps
- Oil rig packing services
- Offshore oil & gas projects (Packing, lashing & securing)
- Customized packaging onsite (Pallets & wooden boxes)
- Skidding
- Heavy machinery packaging

The offered services are delivered under the supervision of professionals having vast experience in their respective field. Shaik's multi services operate from its large facility located in the Jebel Ali industrial area having full services including heat treatment chamber, automated equipments for manufacturing customized timber packaging. Utilising our industry knowledge, product, CAD design, we identify and build customised timber packaging solutions for client's specific requirement to deliver their products more efficiently.

Shaik's multi services packaging products includes:

- Timber cases, crates and pallets,
- Wooden boxes (timber & plywood)
- Heat shrinks & plastic wrapping
- Heavily padded cases for fragile goods.

Shaik's multi services have successfully packaged goods of all shapes, sizes and weights that have travelled across the globe withstanding all conditions and temperatures meeting global packaging standards.

“ Customer satisfaction is our ultimate aim and we are responsive to their needs. All our services are most competitive and quality oriented ”

"We have extensive relationship with organisation of all sizes, among our strengths in the marketplace is our commitment to great customer service, from design to delivery. This is achieved through investment in the development of our employees, led by an experienced and proven management team."

VISION

To be market leader in the packaging industry through innovation, transparency and best international practices.

MISSION

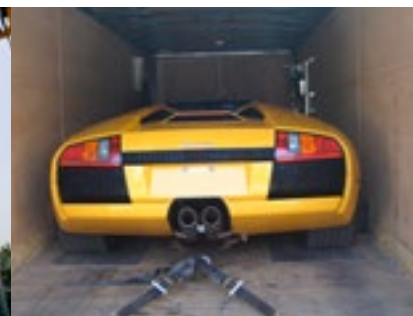

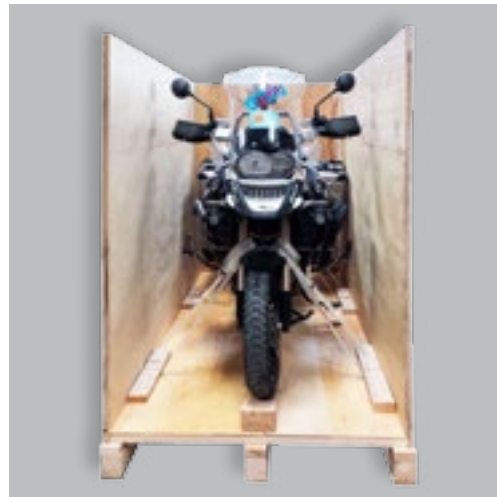

To provide quality packaging solutions for logistics, shipping and manufacturing companies through latest technology as well as effective cost saving techniques meeting highest international standards.

OUR SERVICES

- ▀ Specialized packing
- ▀ Cargo loading / unloading and repacking
- ▀ Modified atmosphere packaging (MAP) or Industrial vacuum packing
- ▀ Vapor corrosion inhibitor (VCI) packing
- ▀ Industrial wood packaging
- ▀ Export Airworthy / Seaworthy / Truck-worthy / Roadworthy Packing
- ▀ Packing solutions for long term / short term storage
- ▀ Gas packing solutions / Nitrogen packing
- ▀ Foam moulding packing
- ▀ Custom design packing solutions
- ▀ Removal of packing material, site and container cleaning
- ▀ Dangerous goods packaging
- ▀ MIL- Specs packing
- ▀ Contract packing / In house packing / on site packing
- ▀ Raw wood outdoor furniture, outdoor fixtures, wooden flooring decks, wooden stages and pallet designs

All of our products are ISPM-15 certified custom-designed and built to suit your requirements

SCALLOPS & CRADLES

Scallops and cradles can be customized to hold singular or multiple cylindrical items such as pipes which are strong enough to hold diverse weights. They can be used in conjunction with other products or stand-alone support.

WOOD & DUNNAGE

We provide all types of heat treated and normal wood/dunnage required for packing, securing, stowing, skidding as per client's necessity.

Container packing & lashing solutions

Boxes Built To Order - Constructed of kiln dried pine and timber supplied from certified European Plantations. Packing crates available include timber, plywood and MDF boxes with the option of steel framed and flat packs.

We also supply fire briquettes, timber pallets, animal caskets, export crates, heat shrink, plastic wrapping, bubble wrap, plastic lining and foam.

**PLYWOOD BOXES,
WOODEN CRATES,
PALLET & STOPPERS**

GLUTS

Gluts are the ideal choice to transport heavy machinery that ensures shipment is secured during transport. We can customise glut to any individual specification meeting any shape, size, labeling and strapping requirements.

Export Standards

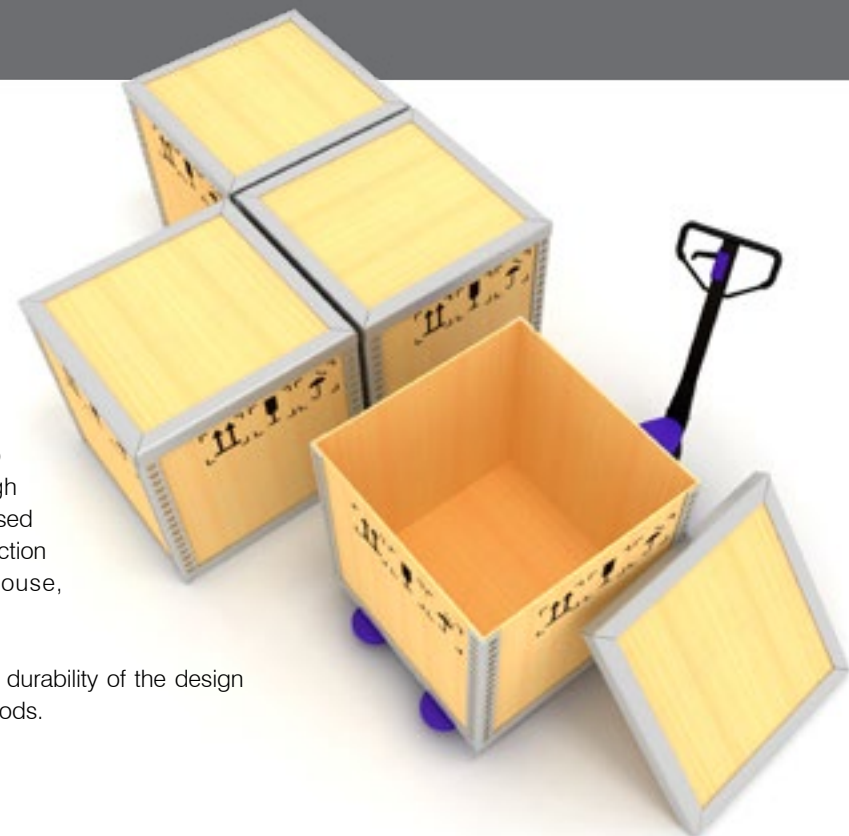

ISPM 15 is the international standard for regulating wood packaging in international trade. For export purposes, all our export cases are stamped with a certification mark after treatment.

STEEL FRAMED EXPORT

We manufacture sturdy and custom designed export cases to suit all national and international transport requirements.

Our unique steel-reinforced export cases are custom-designed to your specifications and have heavy-duty support through the use of our superior quality timber and highly specialised welding skills. In addition, our professional design and production team create the steel frame for our export cases in-house, guaranteeing a quality finish.

The steel-frame around export cases enables precision and durability of the design and will ensure plywood panels remain robust for lengthy periods.

LIVESTOCK CRATES

We build customized timber and wooden crates for safe transport of sheep, goats, cattle, ostriches, horses, dogs and other livestock via air, sea or ground transportation. Our specially designed wooden boxes with timber crates suit the various configurations of ship and aircraft contours.

We ensure our transport containers allow proper airflow with plastic lining and absorbent materials inside. These can be further customised to a very specific requirement.

We manufacture sturdy and custom designed export cases to suit all national and international transport requirements.

The steel-frame around export cases enables precision and durability of the design and will ensure plywood panels remain robust for lengthy periods

FUMIGATION

Fumigation as per ISPM 15 standards

Fumigation is a process in which a commodity is treated in a gas tight enclosure for a certain period of time to eliminate pest infestation without leaving any residual effect. It plays a key role, particularly in grain preservation as it controls insects developing inside and outside the grain storage and crawling and hidden pests. Methyl Bromide is the ONLY fumigant permitted under the ISPM 15 standards for wood packaging materials used in exporting commodities. The administration of the ISPM 15 standards related to the chemical gas Methyl Bromide in the wood packaging industry is directly supervised by the National Wooden Pallet and Container Association (NWPCA).

Mold Prevention : Mold – Free Pallets

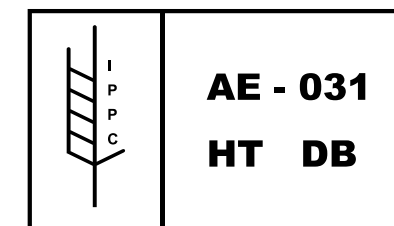

Molds to be those fungi that produce pigmented spores on the wood surface. These spores are typically capable of becoming airborne and can land on any wet wood where they germinate to produce hyphae that grow in to the wood to use stored sugars, proteins and other compounds and this in turn will discolour the wood. Molds can also be limited by application of prophylactic fungicides. These chemicals are applied by dipping or spraying shortly after sawing and can provide protection for three to six months

Cargo Fumigation

Fumigation plays an important role when food grains in ship cargo are transported between countries to prevent from various pests attacks. In most cases it is done as a preventive measure. However, fumigation of shipping containers is advisable, if shipment duration is longer than five days, as phosphine concentration inside the container will be higher for the first 2 – 3 days and not safe for the person who is discharging the cargo. Usage of appropriate PPE during discharge is always advisable. Safe disposal of phosphine residue is also important. Usually, a Warning Label will be placed in containers after the fumigation.

Ship Hold Fumigation

For local consumption U.A.E. depends 100% on import of all food grains and other agricultural products. Due to its strategic location it is known as import and reexport hub. Often many ships arrive at various U.A.E. port and dock for many days with hundreds of thousands tons of food grains. During this period, many of them procure fumigation services locally. Agility Exterminating and Fumigating Services LLC involved with many shipping agencies and cargo owners and provides fumigation services in seaports and sometimes off shore.

HEAT TREATMENT

To minimise the spread of pests ISPM15 specifies requirements for treatment and the certification mark on wooden packaging, which is adopted by close to 200 countries. ISPM15 covers pallets, boxes and crates. Only after a prescribed treatment can wood be marked in the manner as being ISPM15 compliant.

Heat Treatment Chamber

Warehouse Fumigation

Warehouse fumigation involves fumigating the commodities either in loose conditions or packed in bags or other packing, stored in godowns, warehouses, storage which is stationary.

Some typical fumigation methods:

- Stack fumigation under tarpaulin.
- Fumigating outdoor batch of goods.
- Silo fumigation for bulk goods.
- Fumigating factories, wheat processing chain, animal feed etc.

Food processing machinery fumigation

Fumigation Services operations staffs are well trained and experienced in carrying out fumigation of flour mill machinery, spices processing machinery and other food processing machineries. Carrying out the fumigation of food processing machineries on a regular and periodic basis would reduce the infestation level inside the machinery ducts and chambers. In the longer run, this regular exercise would control further infestation. Pest control for food processing units:

Fumigation Services undertake efficient pest controlling measures to maintain a pest free environment in food processing industry. Fumigation Services staff regularly undertake insect monitoring process, spraying operations and are well versed in maintaining the records regarding pest control program conducted, meeting compliance standards of the respective regulatory bodies and meeting the requirements of customers in records management.

Anti-Fungal treatment for pallets used in export packing

The treated wooden packing materials will last longer and can be used by the customers to exhibit the products in the importing country. Anti fungal treatment for wooden packing materials is carried out with efficiency fungicides prior to shipment.

Heat Treatment for wood packing materials with IPPC logo

The only currently approved measure for wood treatment is heat treatment where the wood is treated to a minimum temperature of 56°C for at least 30 minutes (HT) throughout the profile of the wood.

Wood treated in accordance with ISPM15 should be marked with:

- The IPPC logo for wood packaging material
- The ISO two-digit code for the country of manufacture
- A unique producer code assigned by the National Plant Protection Organisation
- The appropriate treatment code, HT (for Heat Treatment)
- No other information is permitted in the mark which must be contained within a border

Some other features are

- Empty Container Fumigation
- Agricultural Products Fumigation
- Air cargo Fumigation
- Mills Fumigation
- Termite Control Treatment
- General insects and pest control
